

INDICATORS.

GEO. W. CHURCH, 109 Fulton Street, New York.

Church's Latest Improved Double Speed Indicator.

Accurate, reliable, and being the thinnest and lightest Indicator made, is just suited for carrying in the pocket. To set Indicator, bring raised pin on the large dial, and hole in small dial together, and use as usual. Right hand running shafts are counted by outside figures. This Indicator runs up to two thousand; it is adapted to pointed or hollow centers, and has a raised sight on dial so as to count by touch. To ascertain the number of revolutions of any shaft in a given time, place the point of the Indicator in the centre of the shaft and for every one hundred revolutions the dial will move once, while the thousand pointer will indicate one number, the dial being marked into twenty parts. It may be applied to the shaft revolving either to the right or left. Price, nickel plated, with split cap for pointed centers, \$1.50 each.

Either Right or Left.

Single Speed Indicator.

Price, nickel plated, with split cap for pointed centers, \$1.00 each.
